Sixth Semester B.E. Degree Examination, June/July 2018 Operations Research

Time: 3 hrs.

Max. Marks: 80

Note: Answer any FIVE full questions, choosing one full question from each module.

Module-1

- 1 a. Define operations research. List and explain the various phases of an operations research study. (06 Marks)
- b. An agriculturist has a farm with 126 acres. He produces Tomato, Mango and Potato. Whatever he raises is fully sold in the market. He gets Rs.5/- for Tomato/kg, Rs.4/- for Mango/kg and Rs.5/- for Potato/kg. The average yield is 1,500 kg of Tomato/acre, 1800 kg of Mango/acre and 1200kg of Potato/acre. To produce each 100kg of Tomato and Mango and to produce each 80kg of Potato a sum of Rs.12.50 has to be used for manure. Labour required for each acre to raise the crop is 6 man-days for Tomato and Potato each and 5 man-days for Mango. A total of 500 man-days of labour at a rate of Rs.40/- per man day are available. Formulate this as a LP model to maximize the agriculturist's total profit. (10 Marks)

OR
